6. PUMP DOWN ................................................................................ 6

When Connecting Refrigerant Tubing
• Keep all tubing runs as short as possible.
• Use the flare method for connecting tubing.
• Apply refrigerant lubricant to the matching surfaces of the flare and union tubes before connecting them, then tighten the nut with a torque wrench for a leak-free connection.
• Check carefully for leaks before opening the refrigerant valves.

NOTE:
Depending on the system type, liquid and gas lines may be either narrow or wide. Therefore, to avoid confusion the refrigerant tubing for your particular model is specified as either "small" or "large" rather than as "liquid" or "gas".

When Servicing
• Turn the power OFF at the main circuit breaker panel before opening the unit to check or repair electrical parts and wiring.
• Keep your fingers and clothing away from any moving parts.
• Clean up the site after you finish, remembering to check that no metal scraps or bolts of wiring have been left inside the unit being serviced.
• After installation, explain correct operation to the customer, using the operating manual.

WARNING
To avoid getting an electric shock, never touch the electrical components soon after the power supply has been turned off. After turning off the power, always wait 10 minutes or more before you touch the electrical components.

Installation of this product must be done by experienced service technicians or professional installers only in accordance with this manual. Installation by non-professional or improper installation of the product might cause serious accidents such as injury, water leakage, electric shock, or fire. If the product is installed in disregard of the instructions in this manual, it will void the manufacturer’s warranty.

Do not turn on the power until all work has been completed. Turning on the power before the work is completed can cause serious accidents such as an electric shock or a fire.

If refrigerant leaks when you are working, ventilate the area. If the leaking refrigerant is exposed to a direct flame, it may produce a toxic gas.

Installation must be performed in accordance with regulations, codes, or standards for electrical wiring and equipment in each country, region, or the installation place.

Do not use this equipment with air or any other unspecified refrigerant in the refrigerant lines. Excess pressure can cause a rupture.

During installation, make sure that the refrigerant pipe is attached firmly before you run the compressor. Do not operate the compressor under the condition of refrigerant piping not attached properly with 2-way or 3-way valve open. This may cause abnormal pressure in the refrigeration cycle that leads to rupture and even injury.

When installing or relocating the air conditioner, do not mix gases other than the specified refrigerant (R410A) to enter the refrigerant cycle. If air or other gas enters the refrigerant cycle, the pressure inside the cycle will rise to an alarmingly high value and cause rupture, injury, etc.

For appropriate working of the air conditioner, install it as written in this manual.

To connect indoor unit and outdoor unit, or indoor unit and branch box, use air conditioner piping and cables available through your local distributor. This manual describes proper connections using such installation set.

Do not modify power cable, use extension cable or branch wiring. Improper use may cause electric shock or fire by poor connection, insufficient insulation or over current.

Do not purge the air with refrigerants but use a vacuum pump to vacuum the installation.

There is no extra refrigerant in the outdoor unit for air purging.

Do not use means to accelerate the defrosting process or to clean, other than those recommended by the manufacturer.

The appliance shall be stored in a room without continuously operating ignition sources (for example: open flames, an operating gas appliance or an operating electric heater).

Do not pierce or burn.

Be aware that refrigerants may not contain an outdoor.

Using the same vacuum pump for different refrigerants may damage the vacuum pump or the unit.

Use a clean gauge manifold, vacuum pump and charging hose for R410A exclusively.

1. SAFETY PRECAUTIONS

1.1. IMPORTANT! Please read before starting

This air conditioning system meets strict safety and operating standards. As the installer or service person, it is an important part of your job to install or service the system so it operates safely and efficiently.

For safe installation and trouble-free operation, you must:
• Carefully read this instruction booklet before beginning.
• Follow each installation or repair step exactly as shown.
• Observe all local, state, and national electrical codes.
• Pay close attention to all warning and caution notices given in this manual.

WARNING: This symbol refers to a hazard or unsafe practice which can result in personal injury or death.

CAUTION: This symbol refers to a hazard or unsafe practice which can result in personal injury and the potential for product or property damage.

Installation must be performed in accordance with the requirements of NEC and CEC by authorized personnel only.

1.2. Special precautions

When Wiring

ELECTRICAL SHOCK CAN CAUSE SEVERE PERSONAL INJURY OR DEATH. ONLY A QUALIFIED, EXPERIENCED ELECTRICIAN SHOULD ATTEMPT TO WIRE THIS SYSTEM.

• Do not supply power to the unit until all wiring and tubing are completed or reconnected and checked.
• Highly dangerous electrical voltages are used in this system. Carefully refer to the wiring diagram and these instructions when wiring. Improper connections and inadequate earthing (grounding) can cause accidental injury or death.
• Earth (Ground) the unit following local electrical codes.
• Connect all wiring tightly. Loose wiring may cause overheating at connection points and a possible fire hazard.

When Transporting

Be careful when picking up and moving the indoor and outdoor units. Get a partner to help, and bend your knees when lifting to reduce strain on your back. Sharp edges or thin aluminum fins on the air conditioner can cut your fingers.

When Installing...

...In a Ceiling or Wall
Make sure the ceiling/wall is strong enough to hold the unit’s weight. It may be necessary to construct a strong wood or metal frame to provide added support.

...In a Room
Properly insulate any tubing run inside a room to prevent "sweating" that can cause dripping on the air conditioner and wall. Provide a suitable air baffle.

...In Moist or Uneven Locations
Properly insulate any tubing run inside a room to prevent "sweating" that can cause drip-water damage and abnormal vibration.

...In an Area with High Winds
Securely anchor the outdoor unit down with bolts and a metal frame.

...In a Snowy Area (for Heat Pump-type Systems)
Install the outdoor unit on a raised platform that is higher than drifting snow.

...In a Room
When Servicing, turn the power OFF at the main circuit breaker panel before opening the unit to check or repair electrical parts and wiring.

When Connecting Refrigerant Tubing

• Keep all tubing runs as short as possible.
• Use the flare method for connecting tubing.
• Apply refrigerant lubricant to the matching surfaces of the flare and union tubes before connecting them, then tighten the nut with a torque wrench for a leak-free connection.
• Check carefully for leaks before opening the refrigerant valves.

NOTE:
Depending on the system type, liquid and gas lines may be either narrow or wide. Therefore, to avoid confusion the refrigerant tubing for your particular model is specified as either "small" or "large" rather than as "liquid" or "gas".

When Servicing

• Turn the power OFF at the main circuit breaker panel before opening the unit to check or repair electrical parts and wiring.
• Keep your fingers and clothing away from any moving parts.
• Clean up the site after you finish, remembering to check that no metal scraps or bolts of wiring have been left inside the unit being serviced.
• After installation, explain correct operation to the customer, using the operating manual.

WARNING
To avoid getting an electric shock, never touch the electrical components soon after the power supply has been turned off. After turning off the power, always wait 10 minutes or more before you touch the electrical components.

Installation of this product must be done by experienced service technicians or professional installers only in accordance with this manual. Installation by non-professional or improper installation of the product might cause serious accidents such as injury, water leakage, electric shock, or fire. If the product is installed in disregard of the instructions in this manual, it will void the manufacturer’s warranty.

Do not turn on the power until all work has been completed. Turning on the power before the work is completed can cause serious accidents such as an electric shock or a fire.

If refrigerant leaks when you are working, ventilate the area. If the leaking refrigerant is exposed to a direct flame, it may produce a toxic gas.

Installation must be performed in accordance with regulations, codes, or standards for electrical wiring and equipment in each country, region, or the installation place.

Do not use this equipment with air or any other unspecified refrigerant in the refrigerant lines. Excess pressure can cause a rupture.

During installation, make sure that the refrigerant pipe is attached firmly before you run the compressor. Do not operate the compressor under the condition of refrigerant piping not attached properly with 2-way or 3-way valve open. This may cause abnormal pressure in the refrigeration cycle that leads to rupture and even injury.

When installing or relocating the air conditioner, do not mix gases other than the specified refrigerant (R410A) to enter the refrigerant cycle. If air or other gas enters the refrigerant cycle, the pressure inside the cycle will rise to an alarmingly high value and cause rupture, injury, etc.

For appropriate working of the air conditioner, install it as written in this manual.

To connect indoor unit and outdoor unit, or indoor unit and branch box, use air conditioner piping and cables available through your local distributor. This manual describes proper connections using such installation set.

Do not modify power cable, use extension cable or branch wiring. Improper use may cause electric shock or fire by poor connection, insufficient insulation or over current.

Do not purge the air with refrigerants but use a vacuum pump to vacuum the installation.

There is no extra refrigerant in the outdoor unit for air purging.

Do not use means to accelerate the defrosting process or to clean, other than those recommended by the manufacturer.

The appliance shall be stored in a room without continuously operating ignition sources (for example: open flames, an operating gas appliance or an operating electric heater).

Do not pierce or burn.

Be aware that refrigerants may not contain an outdoor.

Using the same vacuum pump for different refrigerants may damage the vacuum pump or the unit.

Use a clean gauge manifold, vacuum pump and charging hose for R410A exclusively.
Do not modify this unit, such as opening a hole in the cabinet.

During the pump-down operation, make sure that the compressor is turned off before you remove the refrigerant piping. Do not remove the connection pipe while the compressor is in operation with 2 way or 3 way valve open. This may cause abnormal pressure in the refrigeration cycle that leads to rupture and even injury.

This unit must be installed by qualified personnel with a capacity certification of handling refrigerant fluids. Refer to regulation and laws in use on installation place.

Install the unit by following local codes and regulations in force at the place of installation, and the instructions provided by the manufacturer.

This unit is part of a set constituting an air conditioner. The unit must not be installed alone or be installed with non-authorized device by the manufacturer.

When installing pipes shorter than 3 m, sound of the outdoor unit will be transferred to the indoor unit, which will cause large operating sound or some abnormal sound.

To protect the persons, earth (ground) the unit correctly, and use the power cable combined with an Earth Leakage Circuit Breaker (ELCB).

The units are not explosion proof, and therefore should not be installed in explosive atmosphere.

This unit contains no user-serviceable parts. Always consult experienced service technicians for repairing.

When moving or relocating the air conditioner, consult experienced service technicians for disconnection and reinstallation of the unit.

Children should be monitored to ensure they do not play with the device.

This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety. Children should be supervised to ensure that they do not play with the appliance.

Do not touch the aluminum fins of heat exchanger built-in the indoor or outdoor unit to avoid personal injury when you install or maintain the unit.

Do not place any other electrical products or household belongings under indoor unit or outdoor unit. Condensation dripping from the unit might get them wet, and may cause damage or malfunction of your property.

### 2. ABOUT THIS PRODUCT

- All Fujitsu General products are manufactured to metric units and tolerances. United States customary units are provided for reference only. In cases where exact dimensions and tolerances are required, always refer to metric units.

### 2.1. Special tools for R410A

<table>
<thead>
<tr>
<th>Tool name</th>
<th>Change from R22 to R410A</th>
</tr>
</thead>
<tbody>
<tr>
<td>Gauge manifold</td>
<td>Pressure is high and cannot be measured with a conventional (R22) gauge. To prevent erroneous mixing of other refrigerants, the diameter of each port has been changed. It is recommended to use gauge with seals -0.1 to 5.3 MPa (-1 to 53 bar) for high pressure, -0.1 to 3.8 MPa (-1 to 38 bar) for low pressure.</td>
</tr>
<tr>
<td>Charge hose</td>
<td>To increase pressure resistance, the hose material and base size were changed. (R410A)</td>
</tr>
<tr>
<td>Vacuum pump</td>
<td>A conventional vacuum pump can be used by installing a vacuum pump adapter. (Use of a vacuum pump with a series motor is prohibited.)</td>
</tr>
<tr>
<td>Gas leakage detector</td>
<td>Special gas leakage detector for HFC refrigerant R410A.</td>
</tr>
</tbody>
</table>

### Copper pipes

Copper pipes is necessary to use seamless copper pipes and it is desirable that the amount of residual oil is less than 40 mg/10 m. Do not use copper pipes having a collapsed, deformed or discolored portion (especially on the interior surface). Otherwise, the expansion value or oil is less than 40 mg/10 m. Do not use copper pipes having a collapsed, deformed or discolored portion (especially on the interior surface). Furthermore, it can cause serious accidents such as water leakage, electric shock, or fire.

### Special gas leakage detector for HFC refrigerant R410A.

### En-2

---

**WARNING**

2.2. Power

To install a unit that uses R410A refrigerant, use dedicated tools and piping materials that have been manufactured specifically for R410A use. Because the pressure of R410A refrigerant is approximately 1.6 times higher than R22, failure to use dedicated piping material or improper installation can cause rupture or injury. Furthermore, it can cause serious accidents such as water leakage, electric shock, or fire.

### CAUTION

2.3. Electric requirement

Be sure to install a breaker of the specified capacity. Regulation of cables and breaker differs from each locality, refer in accordance with local rules.

### WARNING

---

**WARNING**

2.4. Pipe length

If the pipe lengths and height differences are not kept as shown in the table, correct operation cannot be guaranteed.

The outdoor unit with the refrigerant removed from the packaging is sealed. (Indoor unit, the refrigerant is not sealed.)
4. INSTALLATION DIAGRAM

2.5. Additional charge

Refrigerant suitable for a piping length of 49 ft (15 m) is charged in the outdoor unit at the factory. When the piping is longer than 49 ft (15 m), additional charging is necessary. For the additional amount, see the table below.

<table>
<thead>
<tr>
<th>Pipe length</th>
<th>49 ft (15 m)</th>
<th>66 ft (20 m)</th>
<th>Rate</th>
</tr>
</thead>
<tbody>
<tr>
<td>Additional refrigerant</td>
<td>None</td>
<td>+3.5 oz (+100 g)</td>
<td>0.2 oz/ft (20 g/m)</td>
</tr>
</tbody>
</table>

**CAUTION**

When adding refrigerant, add the refrigerant from the charging port at the completion of work.

2.6. Operating range

<table>
<thead>

3. SELECTING THE MOUNTING POSITION

- Decide the mounting position with the customer as follows.
- Do not set to a place where there is oily smoke, oil is used in the factory, the unit can contact sea breeze, sulfide gases will be generated in the hot spring area, corrosive gases will be generated, animal may urine on the unit and ammonia will be generated and a dusty place.

3.1. Outdoor unit

(1) If possible, do not install the unit where it will be exposed to direct sunlight. (If necessary, Install a blind that does not interfere with the air flow.)
(2) Do not install the unit where a strong wind blows or where it is very dusty.
(3) Do not install in an area that has heat sources, vapors, or the risk of leakage or accumulation of flammable gas.
(4) Do not install the unit where people pass.
(5) Take you neighbors into consideration so that they are not disturbed by air blowing into their windows or by noise.
(6) Provide the space shown in figure so that they are not disturbed by air blowing into their windows or by noise.
(7) Install the unit where keep away more than 3 m from the antenna of TV set and Radio.
(8) Outdoor unit should be set to a place where both drainage and itself will not be affected when heating.

**WARNING**

Install at a place that can withstand the weight of the outdoor units and install positively so that the units will not topple or fall.

Install the unit where it will not be tilted by more than 5°.

When installing the outdoor unit where it may exposed to strong wind, fasten it securely.

**CAUTION**

Do not install where there is the danger of combustible gas leakage.
Do not install near heat sources.
If children may approach the unit, take preventive measures so that they cannot reach the unit.

4. INSTALLATION DIAGRAM

- Outdoor unit to be fasten with bolts at the four places without fail.
- Fix securely with bolts on a solid block. (Use 4 sets of commercially available M10 bolt, nut and washer.)
- Since the drain water flows out of the outdoor unit during heating operation, install the drain pipe and connect it to a commercial 16 mm (5/8") hose. (Reverse cycle model only)
- When installing the drain pipe, plug all the holes other than the drain pipe mounting hole in the bottom of the outdoor unit with putty so there is no water leakage. (Reverse cycle model only)
- Install at a place that can withstand the weight of the outdoor units and install positively so that the units will not topple or fall.
- Do not install where there is danger of combustible gas leakage.
- Do not install near heat sources.
- If children may approach the unit, take preventive measures so that they cannot reach the unit.

3.2. Additional charge

Refrigerant suitable for a piping length of 49 ft (15 m) is charged in the outdoor unit at the factory. When the piping is longer than 49 ft (15 m), additional charging is necessary. For the additional amount, see the table below.

<table>
<thead>
<tr>
<th>Pipe length</th>
<th>49 ft (15 m)</th>
<th>66 ft (20 m)</th>
<th>Rate</th>
</tr>
</thead>
<tbody>
<tr>
<td>Additional refrigerant</td>
<td>None</td>
<td>+3.5 oz (+100 g)</td>
<td>0.2 oz/ft (20 g/m)</td>
</tr>
</tbody>
</table>

**CAUTION**

When adding refrigerant, add the refrigerant from the charging port at the completion of work.

2.6. Operating range

<table>
<thead>
<tr>
<th>Mode</th>
<th>Outdoor temperature</th>

</table>

3. SELECTING THE MOUNTING POSITION

- Decide the mounting position with the customer as follows.
- Do not set to a place where there is oily smoke, oil is used in the factory, the unit can contact sea breeze, sulfide gases will be generated in the hot spring area, corrosive gases will be generated, animal may urine on the unit and ammonia will be generated and a dusty place.

3.1. Outdoor unit

(1) If possible, do not install the unit where it will be exposed to direct sunlight. (If necessary, Install a blind that does not interfere with the air flow.)
(2) Do not install the unit where a strong wind blows or where it is very dusty.
(3) Do not install in an area that has heat sources, vapors, or the risk of leakage or accumulation of flammable gas.
(4) Do not install the unit where people pass.
(5) Take you neighbors into consideration so that they are not disturbed by air blowing into their windows or by noise.
(6) Provide the space shown in figure so that they are not disturbed by air blowing into their windows or by noise.
(7) Install the unit where keep away more than 3 m from the antenna of TV set and Radio.
(8) Outdoor unit should be set to a place where both drainage and itself will not be affected when heating.

**WARNING**

Install at a place that can withstand the weight of the outdoor units and install positively so that the units will not topple or fall.

Install the unit where it will not be tilted by more than 5°.

When installing the outdoor unit where it may exposed to strong wind, fasten it securely.

**CAUTION**

Do not install where there is the danger of combustible gas leakage.
Do not install near heat sources.
If children may approach the unit, take preventive measures so that they cannot reach the unit.

4. INSTALLATION DIAGRAM

- Outdoor unit to be fasten with bolts at the four places without fail.
- Fix securely with bolts on a solid block. (Use 4 sets of commercially available M10 bolt, nut and washer.)
- Since the drain water flows out of the outdoor unit during heating operation, install the drain pipe and connect it to a commercial 16 mm (5/8") hose. (Reverse cycle model only)
- When installing the drain pipe, plug all the holes other than the drain pipe mounting hole in the bottom of the outdoor unit with putty so there is no water leakage. (Reverse cycle model only)

3. SELECTING THE MOUNTING POSITION

- Decide the mounting position with the customer as follows.
- Do not set to a place where there is oily smoke, oil is used in the factory, the unit can contact sea breeze, sulfide gases will be generated in the hot spring area, corrosive gases will be generated, animal may urine on the unit and ammonia will be generated and a dusty place.

3.1. Outdoor unit

(1) If possible, do not install the unit where it will be exposed to direct sunlight. (If necessary, Install a blind that does not interfere with the air flow.)
(2) Do not install the unit where a strong wind blows or where it is very dusty.
(3) Do not install in an area that has heat sources, vapors, or the risk of leakage or accumulation of flammable gas.
(4) Do not install the unit where people pass.
(5) Take you neighbors into consideration so that they are not disturbed by air blowing into their windows or by noise.
(6) Provide the space shown in figure so that they are not disturbed by air blowing into their windows or by noise.
(7) Install the unit where keep away more than 3 m from the antenna of TV set and Radio.
(8) Outdoor unit should be set to a place where both drainage and itself will not be affected when heating.

**WARNING**

Install at a place that can withstand the weight of the outdoor units and install positively so that the units will not topple or fall.

Install the unit where it will not be tilted by more than 5°.

When installing the outdoor unit where it may exposed to strong wind, fasten it securely.

**CAUTION**

Do not install where there is the danger of combustible gas leakage.
Do not install near heat sources.
If children may approach the unit, take preventive measures so that they cannot reach the unit.
5. INSTALLATION

5.1. Connector cover removal

Connector cover removal
- Remove the tapping screw.
Installing the connector cover
(1) After inserting the five hooks, then push upward.
(2) Tighten the tapping screw.

5.2. HOW TO CONNECT THE WIRE TO THE TERMINALS

(1) Use ring terminals with insulating sleeves as shown in the figure below to connect to the wire.
(2) Securely crimp the ring terminals to the wires using an appropriate tool so that the wires do not come loose.
(3) Use the specified wires, connect them securely, and fasten them so that there is no stress placed on the terminals.
(4) Do not use a screwdriver that is too small; otherwise, the screw heads may be damaged and prevent the screws from being properly tightened.
(5) Do not tighten the terminal screws too much; otherwise, the screws may break.
(6) See the table below for the terminal screw tightening torques.

<table>
<thead>
<tr>
<th>Tightening torque</th>
<th>M3.5 screw</th>
<th>0.8 to 1.0 N • m</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>M4 screw</td>
<td>1.2 to 1.8 N • m</td>
</tr>
<tr>
<td></td>
<td>M5 screw</td>
<td>2.0 to 3.0 N • m</td>
</tr>
</tbody>
</table>

5.3. Outdoor unit wiring

(1) Remove the tapping screw, then remove the control box cover.
(2) Fasten the Inter-unit wire harness and power supply to the conduit holder using the lock nut.
(3) Connect inter-unit wire harness and power supply to the terminal.
(4) Use the tapping screw to install the control box cover.

NOTE:
- Connector trade size for this unit is 1/2" (12.7 mm). The connector can be bought at a hardware store. Refer to "How to connect wiring to the terminals" for instructions on connecting depending on the wire type you are using.
- The fuse located in the outdoor unit provides power supply protection and may blow when power is applied if the system has been in correctly wired.

Keep the earth wire longer than the other wires.
5.4. Connecting the piping

**CONNECTION**
1. Install the outdoor unit wall cap (supplied with the optional installation set or pro-
cured at the site) to the wall pipe.
2. Connect the outdoor unit and indoor unit piping.
3. After matching the center of the piping, tighten the nut to the specified tightening torque with a torque wrench. (Table 1)

**FLARING**
1. Cut the connection pipe to the necessary length with a pipe cutter.
2. Hold the pipe downward so that cuttings will not enter the pipe and remove the burrs.
3. Insert the flare nut onto the pipe and flare the pipe with a flaring tool. Insert the flare nut (always use the flare tool, or the R22 flaring tool).
4. Use the special R410A flare tool, always use an allowance adjustment gauge and secure the A dimension shown in table 2.

**BENDING PIPES**
1. When bending the pipe, be careful not to crush it.
2. To prevent breaking of the pipe, avoid sharp bends.
3. If the copper pipe is bend the pipe or pulled to often, it will become stiff. Do not bend the pipes more than three times at one place.

**Charging port**
1. Remove the cap, and connect the gauge manifold and the vacuum pump to the charging valve by the service hoses.
2. Vacuum the indoor unit and the connecting pipes until the pressure gauge indicates -0.1 MPa (-76 cmHg).
3. When -0.1 MPa (-76 cmHg) is reached, operate the vacuum pump for at least 30 minutes.
4. Disconnect the service hoses and fit the cap to the charging valve to the specified torque.
5. Remove the blank caps, and fully open the spindles of the 2-way and 3-way valves with a hexagon wrench [Torque: 2.9 N·m (30 kgf·cm)].
6. Tighten the blank caps of the 2-way valve and 3-way valve to the specified torque.

</tbody>
</table>

**5.5. Vacuum**

Do not purge the air with refrigerants, but use a vacuum pump to vacuum the installation. There is no extra refrigerant in the outdoor unit for air purging. Use a vacuum pump and gauge manifold and charging hose for R410A exclusively. Using the same vacuum for different refrigerants may damage the vacuum pump or the unit.
ADDITIONAL CHARGE

**CAUTION**

When moving and installing the air conditioner, do not mix gas other than the specified refrigerant R410A inside the refrigerant cycle.

When charging the refrigerant R410A, always use an electronic balance for refrigerant charging (to measure the refrigerant by weight).

When charging the refrigerant, take into account the slight change in the composition of the gas and liquid phases, and always charge from the liquid phase side whose composition is stable.

Add refrigerant from the charging valve after the completion of the work.

If the units are further apart than the maximum pipe length, correct operation cannot be guaranteed.

GAS LEAKAGE INSPECTION

**CAUTION**

After connecting the piping, check all joints for gas leakage with gas leak detector.

When inspecting gas leakage, always use the vacuum pump for pressure. Do not use nitrogen gas.

5.7. TEST RUN

- Perform test operation and check items below.
  - For the test operation method, refer to the operating manual.
  - The outdoor unit may not operate, depending on the room temperature. In this case, keep on pressing the MANUAL AUTO button of the indoor unit for more than 10 seconds. The operation indicator lamp and timer indicator lamp will begin to flash simultaneously during cooling test run. Then, heating test run will begin in about three minutes when HEAT is selected by the remote control operation. (Please follow the operating manual for remote control operation.)
  - To end test operation, keep on pressing the MANUAL AUTO button of the indoor unit for more than 3 seconds. (When the air conditioner is run by pressing the MANUAL AUTO button, the OPERATION indicator lamp and TIMER indicator lamp of the indoor unit will simultaneously flash slowly.)

OUTDOOR UNIT

1. Is there any abnormal noise and vibration during operation?
2. Will noise, wind, or drain water from the unit disturb the neighbors?
3. Is there any gas leakage?

**CAUTION**

Always turn on the power 12 hours prior to the start of the operation in order to ensure compressor protection.

6. PUMP DOWN

6.1. Pump down

PUMP DOWN OPERATION (FORCED COOLING OPERATION)

To avoid discharging refrigerant into the atmosphere at the time of relocation or disposal, recover refrigerant by doing the forced cooling operation according to the following procedure.

1. Conduct preliminary operation for 5 to 10 minutes using the forced cooling operation. Start the forced cooling operation. Keep on pressing the MANUAL AUTO button of the indoor unit for more than 10 seconds. The operation indicator lamp and timer indicator lamp will begin to flash simultaneously during test run. (The forced cooling operation cannot start if the MANUAL AUTO button is not kept on pressing for more than 10 seconds.)
2. Close the valve stem of 2-way valve completely.
3. Continue the forced cooling operation for 2 to 3 minutes, then close all the valve stems on the 3-way valves.
4. Stop the operation.
   - Press the START/STOP button of the remote controller to stop the operation.
   - Press the MANUAL AUTO button when stopping the operation from the indoor unit side.
   - (It is not necessary to press down for more than 10 seconds.)

**CAUTION**

Please check the refrigerant circuit for any leaks before starting the pump down operation.

Do not proceed with the pump down operation if there is no refrigerant left in the circuit due to bent or broken piping.

During the pump down operation, be sure to turn off the compressor before removing the refrigerant piping.
